Docket No. 006593-1960

SCALE FOR WEIGHING AND DETERMINING A PRICE OF AN ITEM

ABSTRACT

A scale for weighing an item and determining a price for the item includes a weighing station for receiving the item, the weighing station producing at least one weight indicative signal. A scale controller receives the weight indicative signal and determines the price for the item based upon the weight indicative signal. A remote interface link includes associated communication software. A web server associated with the controller serves user interface web page data to the remote interface link for transfer to a remotely located device. Advanced functions such as a monitoring function and service functions may be enabled by remote connection to the scale via the remote interface link.
